

CIDEON – engineering digitized.

CIDEON Solution Discovery

In the realm of product development, engineering departments grapple with daily challenges. Frequently, cross-departmental system gaps arise, resulting in duplicated processes and outdated data. Many companies face a shortage of standardized procedures and data, alongside a scarcity of in-house expertise for maintaining seamless project workflows. Crafting standardized protocols can be an extensive endeavor. Discover how we can revolutionize your engineering processes for greater efficiency and data integrity.

Supercharge your process flows, standardize products, and accelerate innovation cycles with our tailored engineering solutions. Stay ahead in the competitive landscape!

Unlock a holistic view of your value chain with CIDEON Solution Discovery. Our workshop introduces a proven consulting approach, revealing your engineering processes across departments. We emphasize identifying and evaluating your untapped potential, aligning with current and future workflows, and driving fundamental optimization and digitalization in your engineering environment.

Gain a complete view of your value chain.

Maximize Your Engineering Efficiency

- Professional analysis of your actual processes of the existing system landscape
- Structured procedure for the development of a possible target concept
- Optimal cooperation with your experts
- Time savings through well-founded workshop and implementation know-how
- Quality increase of your implementation project
- Optimal preparation for the implementation project

Key phases in the CIDEON Solution Discovery

Digitize Engineering with Our Structured Approach

The CIDEON Solution Discovery Workshop is divided into four key components.

As-is Assessment:

Collaborating with your management and department heads across various departments, we identify and articulate your optimization opportunities based on typical project processes. This involves addressing key questions like:

- What challenges do you currently face?
- Which activities/tasks demand significant effort and extend project timelines?
- What's the error rate and vulnerability?
- Where do data discrepancies or redundancies occur?

Targeted Vision:

This stage involves jointly valuating the identified potentials and initially prioritizing potential process and data optimizations. Finally, we outline the next steps towards a focused comprehensive solution.

Turning Vision into Reality:

Our experts bridge the gap between your vision and a concrete solution structure. We consider system architecture and outline potential risks. This stage allows for estimating both internal and external costs, culminating in a detailed implementation/project plan.

Finalization:

The workshop concludes with a comprehensive presentation of the results and a detailed implementation/project plan. We'll present a viable solution proposal harnessing the identified potentials, along with a tangible suggestion for the logical next steps in implementation.
