Cideon Sparify

Have you ever wondered how companies are able to provide a wide variety of spare parts in today's market?

The creation of spare parts catalogs is a complex task. It requires careful planning, efficient data management systems and continuous updating. This is the only way to ensure that spare parts catalogs are accurate and up to date. In particular, the time and effort involved can be immense, as different departments (engineering, service, spare parts department) and redundant systems are involved. This quickly leads to a high maintenance effort.

Fast and Accurate: The Automated Solution for Spare Parts Catalogs

Cideon Sparify is a standardized software solution for the visualization and selection of spare parts. It enables the direct reuse of CAD models from the engineering department as well as important data from your PDM system without further effort and provides your customers with appealing visualizations in an online spare parts catalog.

We offer Cideon Sparify in an Autodesk Inventor/Vault environment, but adaptation to other CAD and PDM systems is also possible.

Benefits for You

- Minimize manual catalog maintenance
- Eliminate redundant tasks
- Seamless transfer of CAD models from the engineering department
- Integrated transfer of critical metadata from the PDM system
- Easily upload from your PDM system to the spare parts viewer
- Use of a modern medium for spare parts distribution
- Simple change processes for the updating of catalogs
- Reduced need for staff and expertise in your spare parts department

Functional Scope

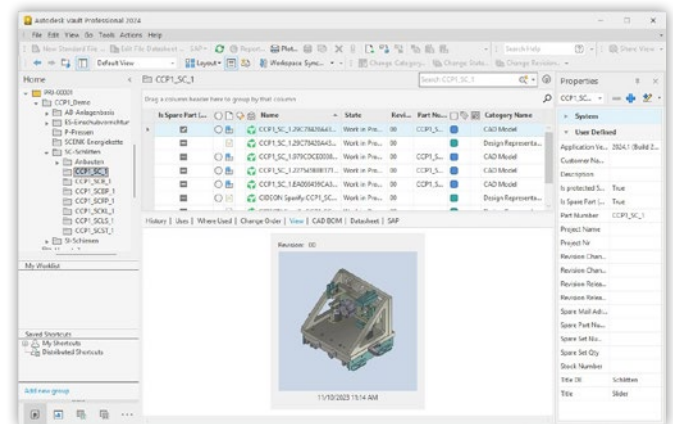

Thanks to the 3D visualization of machines and products in the Spare Parts Viewer, the selection of the required spare parts is simplified. It also provides support for inquiries and managing the spare parts ordering.

Seamless Spare Parts Management for Everyone Involved

Cideon Sparify simplifies the management of spare parts for you and your customers.

Customers can access the application via an external link or iFrame integration. There they can order clearly labeled and easily distinguishable spare parts. The streamlined user interface saves your customers time and minimizes incorrect orders.

The digital spare parts viewer is automatically populated with your data and 3D models via a simple upload. An interface to your PDM system, preferably Autodesk Vault, makes it easy to load the spare parts data into the application.

Models and data are uploaded directly from Autodesk Vault to the spare parts viewer.

Do you already classify your data and models as spare parts in the PDM system? Then the **basic version** of Cideon Sparify is the right choice for you. Do you still have to implement the structures? Then the **professional version** is the right option for you. We help you combine CAD and PDM data in a single source of truth and subsequently load it into the application.
